

How to do Emergency Recovery for X10

※ **This solution works properly for X10 which was pre-installed with the firmware version(over R1560)**

Required Items :

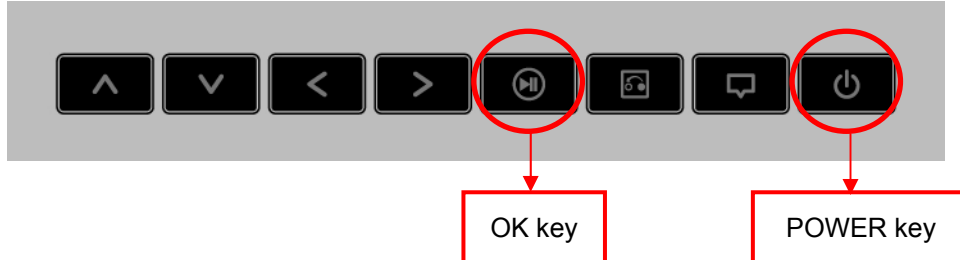

- USB Memory stick
- Firmware(The firmware name should be **firmware.pkg**)
--→ You can rename **X1-CA-X.X.X.r1560.pkg** to **firmware.pkg** with your PC

Procedure

STEP 1: Put the renamed firmware(**firmware.pkg**) into the root directory of USB memory stick with your PC. And, put the USB memory stick to X10 USB host port.

STEP 2: Connect AC adapter to the X10, and turn the switch(on the rear) ON.

STEP 3: With the **OK key** pressed continuously, press the **POWER key** to power ON the X10. (※note : Please keep the **OK key** pressed (for over 5 seconds) until the firmware update screen will be displayed on the screen. You may release the **OK key** after the firmware update screen is shown on the screen)

STEP 4: After STEP3, X10 will update the firmware by itself like normal update process.
(※note : X10 re-boots automatically after finishing firmware update)

Thank you very much !
